Protecting Plants,  
People and the Planet

OrganiShield is a cutting-edge bug-control product approved for certified organic use. It helps ensure peace of mind, greater yield and increased profitability with every crop in greenhouses to nurseries; gardens to field crops.

Our patented formula was artistically inspired by nature to become the only single-product solution on the market that eliminates insects by contact, is day-of-harvest safe and breaks down cleanly and safely.

**Plant safe**

**People safe**

**Planet safe**

Based on sucrose octanoate esters, OrganiShield, is as safe as soap to all but insects. It's even safe around food and for bees.

Unlike products that contain oils and chemicals, OrganiShield leaves nothing behind on plants, the water supply or our land.

Plus, because OrganiShield eliminates bugs by contact, they cannot build a tolerance to our product through unintended evolution.

***"I used OrganiShield and it's awesome. Dead bugs almost instantly. Your product works."***

**~ Greg Powers,  
Independent Grower**

### Why OrganiShield™?

**40 - 80 ML  
PER GALLON OF WATER\***

*\* Detailed instructions on back.*

According to numerous customers, OrganiShield increases crop yield significantly by effectively protecting plants.

For more cost-effective bug control, OrganiShield is available as a concentrate in the following quantities:

- 1 pint
- 1 gallon
- 5 gallons
- 50 gallons
- 250 gallons

### OrganiShield™ Instructions:

For first application and infestations, mix 80 ml of OrganiShield per gallon of water.

For maintenance, use 40 ml per gallon of water.

### OrganiShield Usage Tips!

- Agitate mixture occasionally; then apply.
- Apply thoroughly; spray the bottoms and then tops of leaves until run off.
- Ensure product makes contact with bugs.
- Use every other day until bugs are eliminated; then follow maintenance schedule of every 7 to 10 days.
- Use at any stage of bug's life cycle.

By contact with bugs, OrganiShield eliminates bugs within minutes to hours.

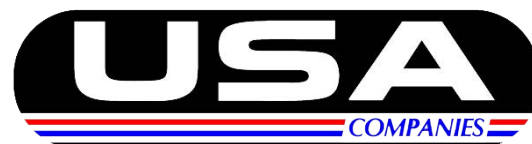

### OrganiShield's Science At-A-Glance

OrganiShield asphyxiates and dewaxes bugs' bodies. The bugs then dry out.

OrganiShield breaks down into four substances: 1) H<sub>2</sub>O, 2) Fatty Acids, 3) Sucrose and 4) CO<sub>2</sub>.

Within less than 72 hours post application, OrganiShield is completely remediated.

The kinds of sucrose esters in OrganiShield's active ingredients are found naturally in many plants' own insecticidal properties. Sucrose esters have also been approved by the FDA for nearly four decades and are food-grade safe.
